Don’t Let Your World Go Up In Smoke.

Home Fire Safety Tips For Smokers

U.S. Fire Administration
FEMA
Always smoke outside, and never smoke in bed. Many things in your home can catch on fire if they touch something hot like a cigarette or ashes.

Have working smoke alarms on every level of your home. You should have a smoke alarm inside bedrooms and outside sleeping areas. Test your smoke alarms every month to make sure they are working.

Make a fire escape plan. If there is a fire, you may have less than 3 minutes to get out of your home. Talk about what you should do if there is a fire.

Protect what matters. Smoking is the number 1 cause of home fire deaths across the country. You can prevent fires caused by cigarettes and other smoking materials by being a fire-safe smoker.
