

Fire Safe Seniors

Keeping Safe in Case of Fire

*Many older adults get hurt or die from house fires each year.
Smoke alarms and escape planning can help keep you safe.*

SMOKE ALARMS

Smoke alarms make a loud noise if they sense smoke or fire.

- **Have smoke alarms in all of these places:**
 - ☑ On every level of your home, including the basement
 - ☑ Directly outside of each sleeping area
- **Test smoke alarms every month.** You can ask a family member, home care assistant, or case worker to test the alarms for you. Push the test button on the alarm; if it does not make a loud noise, the alarm needs new batteries or needs to be replaced.
- **Never disable your smoke alarm by unhooking it or removing the battery.** If your smoke alarm starts “chirping,” the battery is running low and should be replaced.

ESCAPE PLANNING

Think about how to get out of your home in case of fire.

- **Plan your escape around your abilities.**
 - ☑ If possible, identify two ways out of every room.
 - ☑ Keep a phone and emergency numbers to call for help near your bed or sleeping area.
 - ☑ If a fire starts, get out and stay out.
 - ☑ If you cannot get out, get as low to the ground as you can so that you don't breathe in smoke. Smoke can be deadly.
- **If you live with others, plan a safe place to meet outside after escaping.**
