

Put a **FREEZE** *on Winter Fires*

Home fires occur more in winter than in any other season. As you stay cozy and warm this winter, be fire smart!

Nearly half (46%) of all home heating fires occur in December, January and February.

Nearly 1 in every 8 (12%) home fires and nearly 1 in every 5 (18%) home fire civilian deaths involved heating equipment.

Keep anything that can burn **at least 3 feet** from any heat source like fireplaces, wood stoves, radiators or space heaters.

Keep portable generators **outside, away from windows, and as far away** from your home as possible.

Install and test carbon monoxide alarms **at least once a month**.

Plug only **1 heat-producing appliance** (like a space heater) into an electrical outlet at a time.

Have a qualified professional clean and inspect your chimney and vents **every year**.

Store cooled ashes in a tightly covered metal container, and keep it **outside at least 10 feet** from your home and any nearby buildings.
